### **DETAILED ACTION**

1. Claims 1, 4-9 and 21 are pending in the application.
2. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 9/30/09 has been entered.
3. Claims 1, 4-9 and 21 remain rejected under 35 USC 103(a), as being unpatentable over Loo {US Pat. 5,373,077} in view of Buese et al. {US Pat. 5,347,028}, for reasons of record given in the Office Action dated 6/30/09.

### ***Response to Arguments***

Applicant's arguments filed 9/30/09 have been fully considered but they are not persuasive.

Applicant argues that Loo cannot achieve the poly(cyclosiloxane) network comprising the hydrosilation reaction product of the present claim 1 because Loo not only fails to disclose, teach or suggest the crosslinking groups of the present claim 1, but also fails to disclose, teach or suggest a poly(cyclosiloxane) network formed using crosslinks formed between two Si-H groups.

This argument is not convincing because Loo teaches that an organosilicon reactant compound having at least two Si-H groups is reacted with a cyclic polysiloxane and a hydrocarbon polyene, which have double bonds that are reactive in hydrosilation.

The Loo reaction produces crosslinked polymers. One having ordinary skill in the art, in view of Loo, would have surmised that the Si-H groups, contained in Loo's organosilicon reactant compound, are involved in the crosslinking action of the reaction. Thus, the presently claimed invention would have been obvious to one having ordinary skill in the art.
